

What makes a domain worth registering?

Every candidate is scored 1–10 on ten weighted criteria, normalised to /100 — and it only surfaces names whose **.com is actually available**.

✓ live .com availability (RDAP)

✨ AI name generation

🛡️ trademark + social checks

85+/100 is a strong domain

github.com/faizul666/domain-search-agent

THE PAYOFF

A ranked, available shortlist

1	glenthy .com	available	91.1
---	---------------------	-----------	------

2	jotren .com	available	86.7
---	--------------------	-----------	------

3	zerpty .com	available	85.8
---	--------------------	-----------	------

4	ogente .com	available	85.6
---	--------------------	-----------	------

5	plevit .com	available	85.6
---	--------------------	-----------	------

6	florvet .com	available	84.5
---	---------------------	-----------	------

Every name here has an **available .com**, scored and ranked — so you pick from winners, not dead ends.

HOW IT STARTS

Answer 5 quick questions

1 Core keywords

coffee, roast, fresh, office

2 Audience & tone

young professionals, premium but friendly

3 Naming style you prefer

invented / brandable

4 Words to include / avoid

avoid: cheap, 24 · like: nest

5 TLDs to check & max length

.com · max 12 characters

That's all it needs to start generating and checking names.

DOMAIN SEARCH AGENT

**You found the perfect
brand name.**

**Then you checked the
.com.**

It was gone. 🦴

Here's the open-source tool I built to fix that. →

swipe →

github.com/faizul666

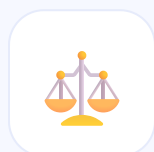

THE PROBLEM

Naming has three silent killers

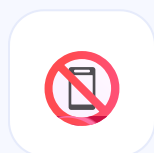

The .com is taken

...and it's the one that matters most.

A trademark landmine

A name that's legally risky to use.

Handles already gone

No matching @ on the socials.

You fall in love with a name — then one of these quietly kills it.

THE FIX

It only shows names you can **actually** register.

- 1** **AI generates brandable names** from your business info
(DeepSeek or Gemini)
- 2** **A live RDAP lookup verifies the .com** — real registration status, no guessing
- 3** **Trademark + GitHub/social screening** on every candidate
- 4** **It loops until it finds N available .coms** — then ranks them

No more chasing names you can't have.

FREE & OPEN SOURCE

Try it. Star it. Make it yours.

Runs locally · bring your own API key · nothing sensitive leaves your machine.
