

What makes a domain worth registering?

Every candidate is scored 1–10 on ten weighted criteria, normalised to /100 — and it only surfaces names whose **.com is actually available**.

✓ live .com availability (RDAP)

✨ AI name generation

🛡️ trademark + social checks

85+/100 is a strong domain

THE PAYOFF

A ranked, available shortlist

Results

☒ Only .com-available

☐ Only 85+ score

7 shown · 7 available · 6 score 85+ · 6 available AND 85+

Domain	Score /100	.com	Brandable (10)	Short (9)	Easy spell (9)	.com avail (10)	TM safe (10)	Socials (8)	Future-proof (9)	Pronounce (8)	Score
glenthy	91.1	available	10	8	10	10	9	10	10	9	91.1
jotren	86.7	available	10	9	10	10	9	3	10	10	86.7
zerpty	85.8	available	10	9	10	10	9	3	10	9	85.8
ogente	85.6	available	10	9	10	10	8	3	10	10	85.6
plevit	85.6	available	10	9	10	10	8	3	10	10	85.6
cazemi	85.6	available	10	9	10	10	8	3	10	10	85.6
florvet	84.5	available	10	8	10	10	8	3	10	10	84.5

How the score works:

each criterion is rated 1–10 and weighted, then normalised to a weighted average out of 100 — $\Sigma(\text{score} \times \text{weight}) / 88 \times 10$.85+ is a strong domain.

Weights — Brandable 10 · Short 9 · Easy spell 9 · .com avail 10 · TM safe 10 · Socials 8 · Future-proof 9 · Pronounce 8 · SEO 7 · Professional 8

* TM safe is a deepseek model-knowledge screen (not a live registry — always shows *) and Socials a live GitHub (+best-effort X/Instagram/TikTok) check. TM results are informational, not legal advice — verify at USPTO/EUIPO. Availability is a live RDAP lookup; "unknown" means the registry didn't answer (rate-limit or no RDAP) — re-run or verify at a registrar.

Every name in the list has an **available .com**, scored and ranked — so you pick from winners, not dead ends.

DOMAIN SEARCH AGENT

**You found the perfect
brand name.**

**Then you checked the
.com.**

It was gone. 🦴

Here's the open-source tool I built to fix that. →

swipe →

github.com/faizul666

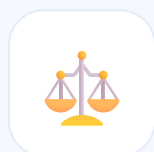

THE PROBLEM

Naming has three silent killers

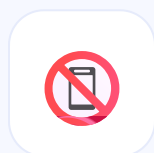

The .com is taken

...and it's the one that matters most.

A trademark landmine

A name that's legally risky to use.

Handles already gone

No matching @ on the socials.

You fall in love with a name — then one of these quietly kills it.

THE FIX

It only shows names you can **actually** register.

- 1** **AI generates brandable names** from your business info
(DeepSeek or Gemini)
- 2** **A live RDAP lookup verifies the .com** — real registration status, no guessing
- 3** **Trademark + GitHub/social screening** on every candidate
- 4** **It loops until it finds N available .coms** — then ranks them

No more chasing names you can't have.

FREE & OPEN SOURCE

Try it. Star it. Make it yours.

Runs locally · bring your own API key · nothing sensitive leaves your machine.
